

AIRP - Incident Response Report

Incident Type: Malware Infection

Analyst: Dirgh Patel

Timestamp: 2026-05-03 18:11:58.514749

Status: Contained

Severity: CRITICAL

Evidence Collected:

- Malware detected on host: WORKSTATION-04
- Malicious file hash (SHA256): a3f1c2e9b84d0f76321acd98ef1234567890abcdef1234567890abcdef123456
- C2 callback IP identified: 185.220.101.47
- Suspicious process tree captured from Sysmon logs
- Outbound connection attempts to C2 logged in Suricata
- Wazuh FIM alert triggered on system32 directory modification

Response Actions Taken:

1. Affected host isolated from network immediately
2. Malicious process terminated and file quarantined
3. C2 IP 185.220.101.47 blocked at perimeter firewall
4. Full disk image taken for forensic preservation
5. Malware hash submitted to VirusTotal for family identification
6. EDR scan initiated across all endpoints for lateral spread check
7. Incident escalated to Tier 2 for root cause analysis

Recommendations:

- Patch the vulnerability exploited for initial access
- Deploy application whitelisting on all endpoints
- Review and tighten PowerShell execution policy
- Update EDR signatures to detect this malware family
