

AIRP - Incident Response Report

Incident Type: Unauthorized Access

Analyst: Dirgh Patel

Timestamp: 2026-05-03 18:13:24.554548

Status: Contained

Severity: HIGH

Evidence Collected:

- Unauthorized login detected for account: admin.service@company.com
- Source IP of access attempt: 91.108.4.177
- Target system accessed: DC01-WINSERVER2022
- Multiple failed login attempts prior to success (brute force pattern)
- Off-hours login time flagged by Wazuh correlation rule
- Privilege escalation attempt detected post-login via Sysmon

Response Actions Taken:

1. Account admin.service@company.com disabled immediately
2. All active sessions for compromised account terminated
3. Source IP 91.108.4.177 blocked at firewall and added to blocklist
4. Password reset and MFA enrollment forced on account
5. Access logs exported and preserved as evidence
6. Active Directory reviewed for additional compromised accounts
7. Incident owner notified and HR loop opened

Recommendations:

- Enforce MFA across all privileged accounts immediately
- Implement account lockout policy after 5 failed attempts
- Deploy geo-fencing rules to flag logins from anomalous locations
- Conduct access rights review - remove unnecessary privileges
